## About Us

AP&O Solutions combines our understanding of government business challenges with our certifications in Microsoft, Amazon, SharePoint, and Oracle capabilities. Our team introduces innovative technologies and industry-leading ITIL based service delivery efforts and IT management tools to achieve high-impact, low-risk solutions for our customers. AP&O is a joint venture formed between All Points Logistics, LLC and Optimized Technical Solutions, Inc. (OTS) as part of the SBA All Small Mentor-Protégé Program (ASMPP) and currently holds a Secret facility clearance. Together, All Points and OTS have over 30 years of experience delivering mission-critical program success for multiple Federal and State government agencies and commercial aerospace customers.

Our Technology Services

	Technical Competencies
IT Service & Management AP&O Solutions IT services and solutions leverage ITIL principles and state-of-the-art IT management tools to provide responsive and effective IT services, troubleshooting, and resolutions to maximize system availability and accessibility. We provide and maintain operating systems, libraries, and other systems software necessary for the effective and reliable operation and security of IT systems.	• Help Desk & Service Desk • Data Center Design & Operations • Systems Administration • Critical Computer System Support • Specialized Maintenance
Data Warehousing & Cloud Management AP&O's data solutions combine appropriate technology, expansive collaboration, and streamlined integration of multi-source data, using a variety of collection techniques. Our team brings a deep Oracle E-Business Suite capability with experience in the entire range of financial, acquisition, and HR solutions. We have the capacity to manage the full Oracle EBS lifecycle, including upgrading to the latest release.	• Architecture Support • Big Data Solutions • Mobile Collaboration • Public/Private Cloud Solutions • Oracle Database Administration • Oracle EBS Application Support
Enterprise & Network Architecture AP&O offers systems architecture expertise to develop products and services, combining in-house hardware/software engineering expertise. Our enterprise-based, comprehensive, web-based, management information software provides an integrated solution for situational awareness, common operating picture, information and knowledge management, and business workflow process management and reporting.	• Management Information Systems • Common Operating Picture • Business Workflow Automation • Data Center Networks • HPC Platforms
Network-Centric IT Solutions AP&O Solutions provides custom network-centric solutions that include on-site, mobile, and/or remote monitoring, operations and controls. Our experts have designed and deployed advanced communication systems, IP telephony technology, and secure communications systems and networks at more than 30 secure facilities across the U.S. and abroad.	• Wired Networks • Wireless Networks • Network Design & Implementation • Secure Networks • Virtual Private Clouds
Software & Applications Programming AP&O Solutions provides software application development for administrative, business, engineering, and scientific applications. We ensure functional requirements are satisfied, interfaces interoperate with existing systems, verification and validation testing is independent of the design organization, and integration and testing activities are carefully planned and reviewed.	• Administrative Applications • Business Applications • Engineering Applications • Scientific Applications • Code Generation

Our Expertise

We are on Agile scrum teams developing GN&C, communications, propulsion, and life support systems software for NASA's Orion spacecraft. We provide software systems engineering, development, integration, and test for flight, ground, and simulation software at labs in Houston and Denver and lead the architecture and development of Orion's real-time simulation system.

Our software developers on NASA's Commercial Crew Program modeled thousands of vehicle malfunctions, using parameter bias, automated triggers, and additional advanced methods to give trainers a variety of anomalous scenarios a spacecraft may experience in flight. These specialized software models provide a robust way to train the crew for operational flight conditions.

Our team offers specialized expertise in the architecture and administration of data management tools. OTS E-Business Suite capabilities are a critical component of the USAF's strategy for financial management systems and ERP projects—including the HR Systems Technical Support and Accounting and Management System. We have provided HR and Federal Financials for 25,000 Airmen with $346B in execution.
